SUMMARY

Skilled in problem-solving, analytical thinking, and implementing scalable applications. Passionate about continuous learning, innovation, and developing scalable technology solutions.

PROJECTS

AI-Based Crop Recommendation System

Built a machine learning model using Python and Scikit-learn to recommend suitable crops based on soil nutrients and environmental factors. Implemented data preprocessing, model training, and evaluation with high accuracy.

Impact: Helps farmers make data-driven decisions to improve crop yield and reduce financial risk.

Web-Based Library Management System

Developed a web-based system to manage book records, user authentication, book issue/return, and fine calculation using MERN/Python stack. Implemented CRUD operations and database integration.

Impact: Automates traditional library processes and reduces manual record errors.

Student Performance Analysis System

Created a data analysis system using Python and Pandas to analyze student performance data and generate visual insights through dashboards and reports.

Impact: Provides actionable insights for improving academic performance and institutional decision-making.

SKILLS

Coding Languages: C, Python.

Tools & IDEs: Visual Studio Code.

Version Control: Git, GitHub.

CERTIFICATIONS

- Salesforce Agentforce
 - Oracle cloud infrastructure Certified AI foundation Associate
 - Oracle cloud infrastructure Certified Generative AI profession
 - cs50x Harvard Introduction to Computer Science
-

EDUCATION

B.Tech AI & DS

2023 - 2027

Muthayammal Engineering College.

CGPA: 7.8
